

# HDAG [redacted organization name] Final Presentation

---

May 2022

Insights from our team's work analyzing grants

HDAG 2022 © All Rights Reserved.

# Summary

---

## Grants

2017 - present

- Country assignment tool
- Grant database
- Time series analysis
- Country analysis

## Data

- Categorized database
- Time series analysis
- Normalizing metric for grant analysis

# 1 Grant Analysis: Overview

---

## Grant Compilation

We used Python, a popular programming language, to scrape and standardize the desired data from 6 websites:

## Time Series Analysis

We conducted preliminary time series analysis using Python to track # of grants and amount awarded by year since 2017

## Country Assignment

We created a python tool to determine the country associated with [REDACTED] recipient organizations.

## Time Series Analysis by Country

We broke down the general time series analysis to track trends by country.

# 1.1 Country Assignment Tool: Overview

---

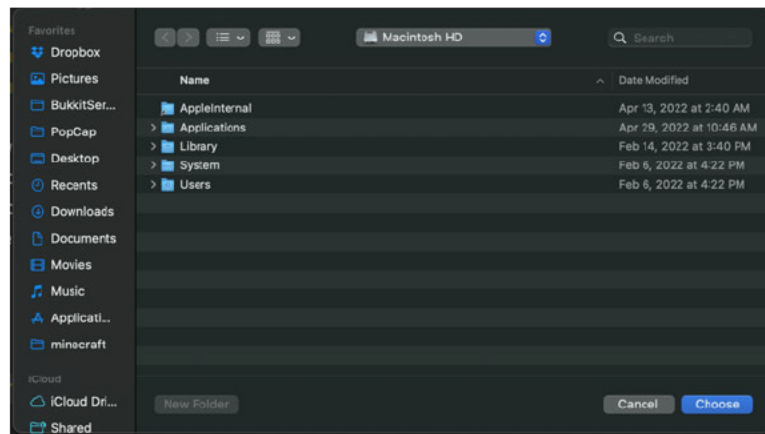

You can still use the  
computer in the  
meantime

# 1.1 Country Assignment Tool: Steps 1-2

---

```
if __name__ == '__main__':  
    root = tk.Tk()  
    root.withdraw()  
    file_path = filedialog.askdirectory()  
    root.destroy()  
    df = pd.read_csv(file_path)
```

# 1.1 Country Assignment Tool: Step 3

---

```
recipients = df["Recipient"]  
count = 0  
for recep in recipients:
```

```
def getCountry(query):  
    count += 1  
    return getCountry(query)
```

# 1.1 Country Assignment Tool: Step 4

---

## 1.2 Giving Metrics Report Data

---

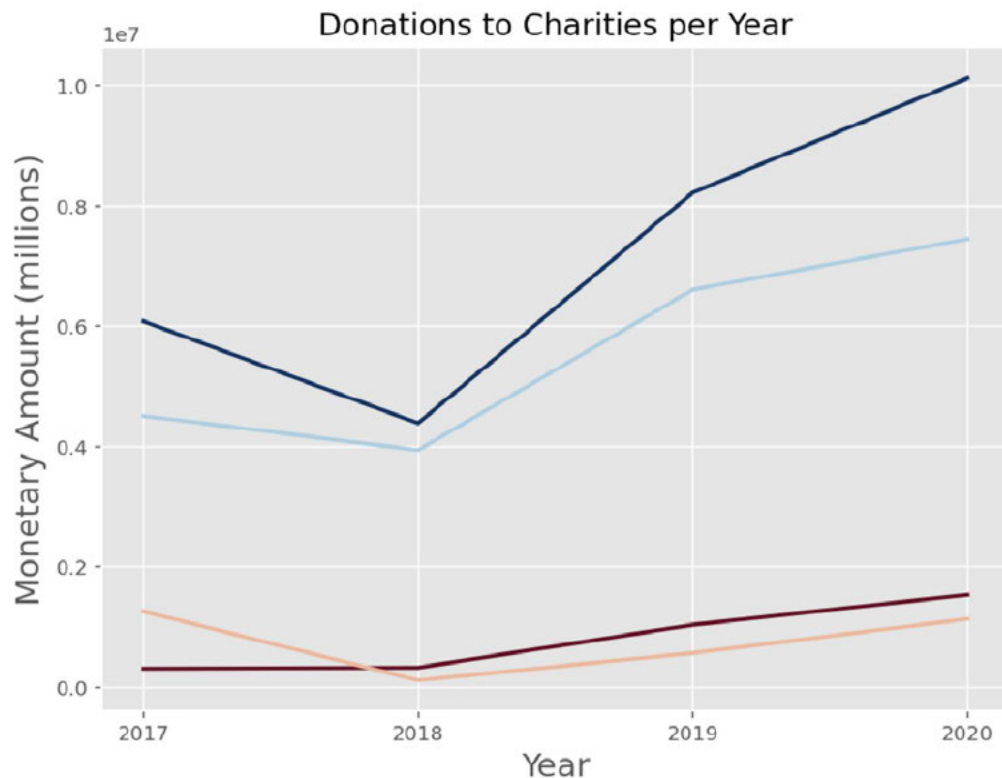

- 4 Categories

- Total (*Total*)
- Merged [redacted]
- Country data - total number of charities & monetary donations broken down by country of origin

## 1.2 Giving Metrics Report - Donations per Year

Insights from time series analysis

## 1.3 Giving Breakdown by Country

### Data Preparation

We aggregated and broke down data in multiple ways to draw more nuanced insights:

### Breakdown by Country and Year

We created pie-charts and map-based visualizations of giving breakdowns by country and year.

- Tools used: pycountry (support for standardizing geographic codes), plotly (generate geographic visualizations), pandas (general data science support)

### Normalize and Refine

We used [redacted] counts by country to normalize our analysis,

We displayed data on a logarithmic scale to give a clearer picture of the gradations in giving metrics

## 1.3 Giving Breakdown by Country: Code Snapshots

---

Data Preparation

Breakdown by Country and Year

Normalize and Refine

```
def prep_country (data, useYear=False, year):  
    if useYear:  
        data = data[data["Year"] == year]  
  
    sumgrants = {}  
    amounts = {}
```

```
    r })  
    })
```

# 1.3 Giving Metrics Percentages Per Country

## Number of Donations by Country

## Monetary Amount by Country

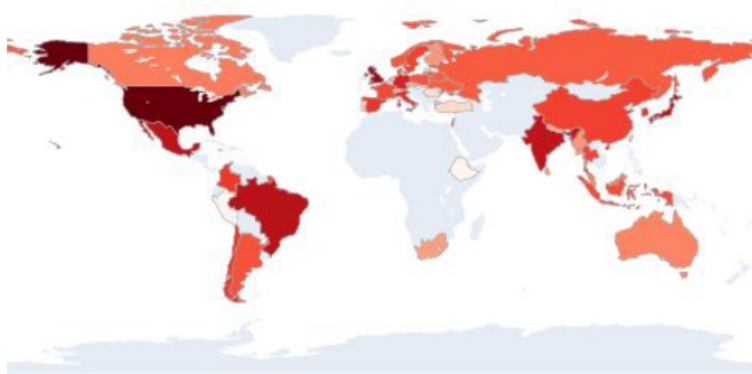

# 1.4 Giving Metrics: Internal vs. External, all years

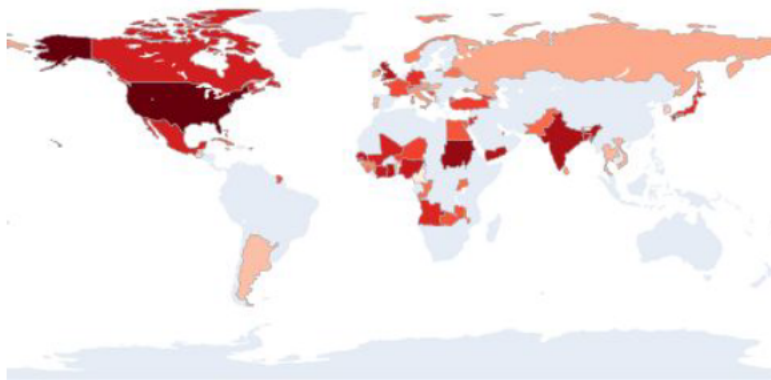

---

\*By amount in USD, log scale

Internal donations

External donations

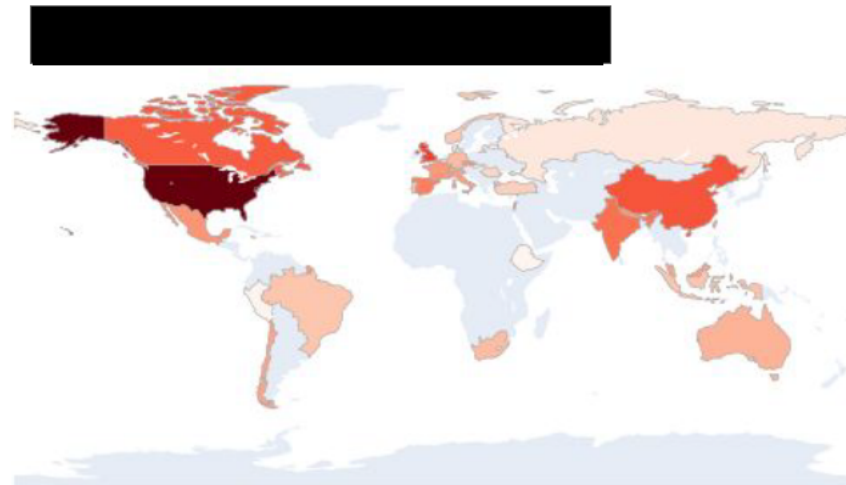

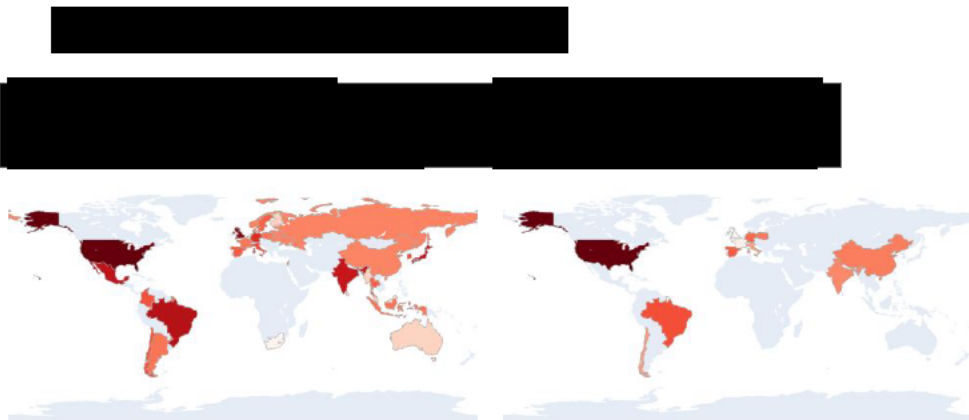

Key insights

\*By amount in USD, log scale

## 1.4 Giving Metrics: Internal Breakdown, all years

---

[Redacted]

2

## 2.1 Data Collection

Data

Selection

Organization

Sourced data from

245 countries

data for over

```
df =  
df.loc  
df.loc
```

All data collection and organization was performed using Python and Excel

## 2.2 Data Organization

Organized available data from 1961 through 2022 into easily navigable spreadsheet

Area	Item	Unit	1991	1992	1993	1994	1995	1996
Afghanistan								
Albania								
Laying								

### Area

→ All data is primarily organized by country

### Item

→ Varies within each category

### Unit

→ All units are normalized within each category

### Year

→ Date range 1961-2020

## 2.3 Data Analysis - Insights

---

## 2.3 [REDACTED] Volumes Over Time

The time series shows [REDACTED] from 1992 to 2020 in a base 10 logarithmic scale

[REDACTED]

## 2.3

## Volumes Over Time

The time series shows by country from 1993 to 2020 in a base 10 *logarithmic* scale

## 2.3

## Volumes by Country

The time series shows [redacted] by country from 1992 to 2020

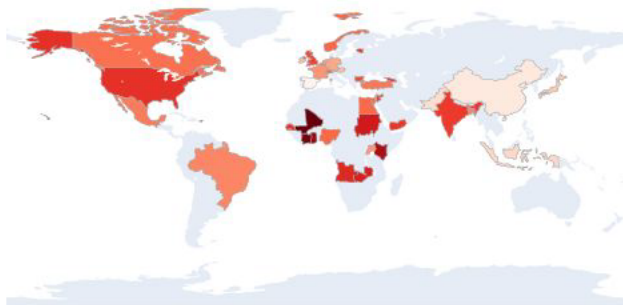

## 2.4 Normalized Giving Metrics by Country Over Time

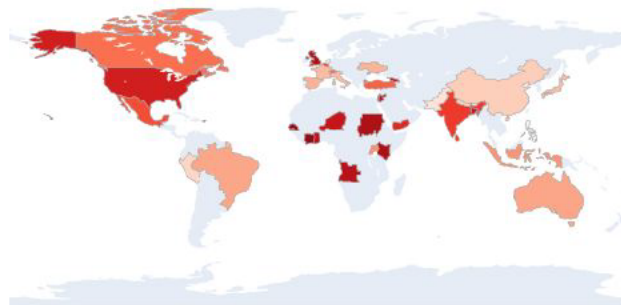

---

2017 to 2020

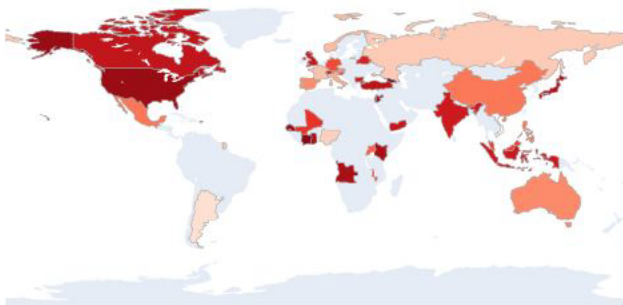

2017

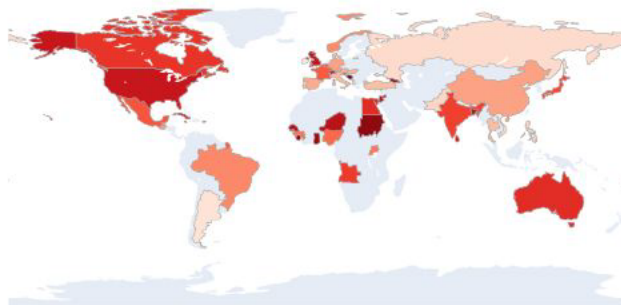

2018

2019

2020

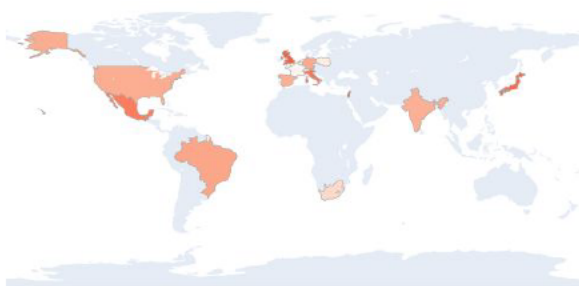

## 2.4 Normalized Giving Metrics by Country Over Time

---

2017 to 2020

2017

2018

2019
