

Onna

Onna would like a program to create a graph/network representing their employee workspace. The problem itself is very open-ended, and Onna is flexible with the delivery and construction of the project. Potential data sources include, slack messages, google drive interactions, email and confluence. The aim is to explore how employees collaborate using various tools and identify ways in which Onna's tools can help.

Overview:

Check out the '[Organizational Graph Concept Powered by Onna](#)' document for details they wrote themselves. *(updated link, should be accessible)*

Details:

Perform exploratory analysis creating a graph of employee workspace interactions, ideally packaged in a docker container. Access data using a secure environment or API.

Skills: Data Analysis, Machine Learning, Graphs
